Comput. Methods Appl. Mech. Engrg. 155 (1998) 383–386

**Computer methods
in applied
mechanics and
engineering**

Subject Index of Volume 155

Boundary element methods

A three-dimensional B-spline boundary element, E. Turoc and M. Aristodemo 119–128

Elasticity

A three-dimensional B-spline boundary element, E. Turoc and M. Aristodemo 119–128

A theoretical and computational model for isotropic elastoplastic stress analysis in shells at large strains, C. Miehe 193–233

An additive Schwarz method for plate bending problems, Q. Gao and L. Li 261–271

On the parametrization of finite rotations in computational mechanics A classification of concepts with application to smooth shells, P. Betsch, A. Menzel and E. Stein 273–305

Finite difference methods

Modelling the behaviour of a PWR core by a homogenization technique, E. Jacquelin, J.P. Lainé, C. Trollat and L. Jézéquel 1– 13

Upwind schemes for the two-dimensional shallow water equations with variable depth using unstructured meshes, A. Bermúdez, A. Dervieux, J.-A. Desideri and M.E. Vazquez 49– 72

On the equivalence of generalized differential quadrature and highest order finite difference scheme, C. Shu and Y.T. Chew 249–260

Finite element and matrix methods

An improved variational method for finite element stress recovery and a posteriori error estimation, A. Tessler, H.R. Riggs, C.E. Freese and G.M. Cook 15– 30

A Gauss–Seidel like algorithm to solve frictional contact problems, F. Jourdan, P. Alart and M. Jean 31– 47

Upwind schemes for the two-dimensional shallow water equations with variable depth using unstructured meshes, A. Bermúdez, A. Dervieux, J.-A. Desideri and M.E. Vazquez 49– 72

Cam–Clay plasticity, R.I. Borja and C. Tamagnini 73– 95

Parallel preconditioning based on h -hierarchical finite elements with application to acoustics, M. Malhotra and P.M. Pinsky 97–117

The two-level FETI method for static and dynamic plate problems. Part I: An optimal iterative solver for biharmonic systems, C. Farhat and J. Mandel 129–151

The two-level FETI method. Part II: Extension to shell problems, parallel implementation and performance results, C. Farhat, P.-S. Chen, J. Mandel and F.X. Roux 153–179

Prediction of the mechanical behavior of nonlinear heterogeneous systems by multi-level finite element modeling, R.J.M. Smit, W.A.M. Brekelmans and H.E.H. Meijer 181–191

A theoretical and computational model for isotropic elastoplastic stress analysis in shells at large strains, C. Miehe 193–233

Enhanced-Discretization Interface-Capturing Technique (EDICT) for computation of unsteady flows with interfaces, T. Tezduyar, S. Aliabadi and M. Behr 235–248

An additive Schwarz method for plate bending problems, Q. Gao and L. Li 261–271

A combined parametric quadratic programming and iteration method for 3-D elastic–plastic frictional contact problem analysis, H. Zhang, W. Zhong and Y. Gu 307–324

A displacement-like finite element model for J_2 elastoplasticity: variational formulation and finite-step solution, G. Alfano, L. Rosati and N. Valoroso	325-358
<i>Fluid mechanics</i>	
Upwind schemes for the two-dimensional shallow water equations with variable depth using unstructured meshes, A. Bermúdez, A. Dervieux, J.-A. Desideri and M.E. Vazquez	49- 72
Enhanced-Discretization Interface-Capturing Technique (EDICT) for computation of unsteady flows with interfaces, T. Tezduyar, S. Aliabadi and M. Behr	235-248
On the equivalence of generalized differential quadrature and highest order finite difference scheme, C. Shu and Y.T. Chew	249-260
Extensions to Karhunen-Loève based approximation of complicated phenomena, I.H. Tarman and L. Sirovich	359-368
<i>General Rayleigh-Ritz and Galerkin techniques</i>	
Extensions to Karhunen-Loève based approximation of complicated phenomena, I.H. Tarman and L. Sirovich	359-368
<i>Heat and diffusion</i>	
On the equivalence of generalized differential quadrature and highest order finite difference scheme, C. Shu and Y.T. Chew	249-260
<i>Incompressible and near incompressible media</i>	
Enhanced-Discretization Interface-Capturing Technique (EDICT) for computation of unsteady flows with interfaces, T. Tezduyar, S. Aliabadi and M. Behr	235-248
On the equivalence of generalized differential quadrature and highest order finite difference scheme, C. Shu and Y.T. Chew	249-260
<i>Kinematics</i>	
On the parametrization of finite rotations in computational mechanics A classification of concepts with application to smooth shells, P. Betsch, A. Menzel and E. Stein	273-305
<i>Modern computer architecture</i>	
Parallel preconditioning based on h -hierarchical finite elements with application to acoustics, M. Malhotra and P.M. Pinsky	97-117
<i>Nonlinear mechanics</i>	
A Gauss-Seidel like algorithm to solve frictional contact problems, F. Jourdan, P. Alart and M. Jean	31- 47
Cam-Clay plasticity, R.I. Borja and C. Tamagnini	73- 95
Prediction of the mechanical behavior of nonlinear heterogeneous systems by multi-level finite element modeling, R.J.M. Smit, W.A.M. Brekelmans and H.E.H. Meijer	181-191
A theoretical and computational model for isotropic elastoplastic stress analysis in shells at large strains, C. Miehe	193-233
Enhanced-Discretization Interface-Capturing Technique (EDICT) for computation of unsteady flows with interfaces, T. Tezduyar, S. Aliabadi and M. Behr	235-248
On the parametrization of finite rotations in computational mechanics A classification of concepts with application to smooth shells, P. Betsch, A. Menzel and E. Stein	273-305
A combined parametric quadratic programming and iteration method for 3-D elastic-plastic frictional contact problem analysis, H. Zhang, W. Zhong and Y. Gu	307-324
A displacement-like finite element model for J_2 elastoplasticity: variational formulation and finite-step solution, G. Alfano, L. Rosati and N. Valoroso	325-358

Numerical solution procedures

Modelling the behaviour of a PWR core by a homogenization technique, E. Jacquelin, J.P. Lainé, C. Trollat and L. Jézéquel 1- 13

An improved variational method for finite element stress recovery and a posteriori error estimation, A. Tessler, H.R. Riggs, C.E. Freese and G.M. Cook 15- 30

A Gauss-Seidel like algorithm to solve frictional contact problems, F. Jourdan, P. Alart and M. Jean 31- 47

Cam-Clay plasticity, R.I. Borja and C. Tamagnini 73- 95

Parallel preconditioning based on h -hierarchical finite elements with application to acoustics, M. Malhotra and P.M. Pinsky 97-117

The two-level FETI method for static and dynamic plate problems. Part I: An optimal iterative solver for biharmonic systems, C. Farhat and J. Mandel 129-151

The two-level FETI method. Part II: Extension to shell problems, parallel implementation and performance results, C. Farhat, P.-S. Chen, J. Mandel and F.X. Roux 153-179

A theoretical and computational model for isotropic elastoplastic stress analysis in shells at large strains, C. Miehe 193-233

Enhanced-Discretization Interface-Capturing Technique (EDICT) for computation of unsteady flows with interfaces, T. Tezduyar, S. Aliabadi and M. Behr 235-248

On the equivalence of generalized differential quadrature and highest order finite difference scheme, C. Shu and Y.T. Chew 249-260

A combined parametric quadratic programming and iteration method for 3-D elastic-plastic frictional contact problem analysis, H. Zhang, W. Zhong and Y. Gu 307-324

Simulation of the gas temperature deviation in large-scale tangential coal fired utility boilers, M. Xu, J. Yuan, S. Ding and H. Cao 369-380

Plasticity

Cam-Clay plasticity, R.I. Borja and C. Tamagnini 73- 95

A theoretical and computational model for isotropic elastoplastic stress analysis in shells at large strains, C. Miehe 193-233

A combined parametric quadratic programming and iteration method for 3-D elastic-plastic frictional contact problem analysis, H. Zhang, W. Zhong and Y. Gu 307-324

A displacement-like finite element model for J_2 elastoplasticity: variational formulation and finite-step solution, G. Alfano, L. Rosati and N. Valoroso 325-358

Problems in physics

Modelling the behaviour of a PWR core by a homogenization technique, E. Jacquelin, J.P. Lainé, C. Trollat and L. Jézéquel 1- 13

Parallel preconditioning based on h -hierarchical finite elements with application to acoustics, M. Malhotra and P.M. Pinsky 97-117

Shells and plates

A theoretical and computational model for isotropic elastoplastic stress analysis in shells at large strains, C. Miehe 193-233

On the equivalence of generalized differential quadrature and highest order finite difference scheme, C. Shu and Y.T. Chew 249-260

On the parametrization of finite rotations in computational mechanics A classification of concepts with application to smooth shells, P. Betsch, A. Menzel and E. Stein 273-305

Solution of differential equations

On the equivalence of generalized differential quadrature and highest order finite difference scheme, C. Shu and Y.T. Chew 249-260

<i>Solutions of ordinary and partial differential equations</i>	
Parallel preconditioning based on h -hierarchical finite elements with application to acoustics, M. Malhotra and P.M. Pinsky	97-117
On the equivalence of generalized differential quadrature and highest order finite difference scheme, C. Shu and Y.T. Chew	249-260
<i>Spline approximation</i>	
A three-dimensional B-spline boundary element, E. Turoc and M. Aristodemo	119-128
<i>Structural mechanics</i>	
An improved variational method for finite element stress recovery and a posteriori error estimation, A. Tessler, H.R. Riggs, C.E. Freese and G.M. Cook	15- 30
The two-level FETI method for static and dynamic plate problems. Part I: An optimal iterative solver for biharmonic systems, C. Farhat and J. Mandel	129-151
The two-level FETI method. Part II: Extension to shell problems, parallel implementation and performance results, C. Farhat, P.-S. Chen, J. Mandel and F.X. Roux	153-179
A theoretical and computational model for isotropic elastoplastic stress analysis in shells at large strains, C. Miehe	193-233
An additive Schwarz method for plate bending problems, Q. Gao and L. Li	261-271
On the parametrization of finite rotations in computational mechanics A classification of concepts with application to smooth shells, P. Betsch, A. Menzel and E. Stein	273-305
<i>Systems of linear and nonlinear simultaneous equations</i>	
A Gauss-Seidel like algorithm to solve frictional contact problems, F. Jourdan, P. Alart and M. Jean	31- 47
An additive Schwarz method for plate bending problems, Q. Gao and L. Li	261-271
<i>Thermal effects and thermodynamics</i>	
Simulation of the gas temperature deviation in large-scale tangential coal fired utility boilers, M. Xu, J. Yuan, S. Ding and H. Cao	369-380
<i>Turbulence</i>	
Extensions to Karhunen-Loeve based approximation of complicated phenomena, I.H. Tarmar and L. Sirovich	359-368
Simulation of the gas temperature deviation in large-scale tangential coal fired utility boilers, M. Xu, J. Yuan, S. Ding and H. Cao	369-380
<i>Viscous flow</i>	
Enhanced-Discretization Interface-Capturing Technique (EDICT) for computation of unsteady flows with interfaces, T. Tezduyar, S. Aliabadi and M. Behr	235-248
On the equivalence of generalized differential quadrature and highest order finite difference scheme, C. Shu and Y.T. Chew	249-260
